

First create the data model using relationship between tables like company and person join with company Name and person and education join with person name. After that we can pull required information from all three tables.

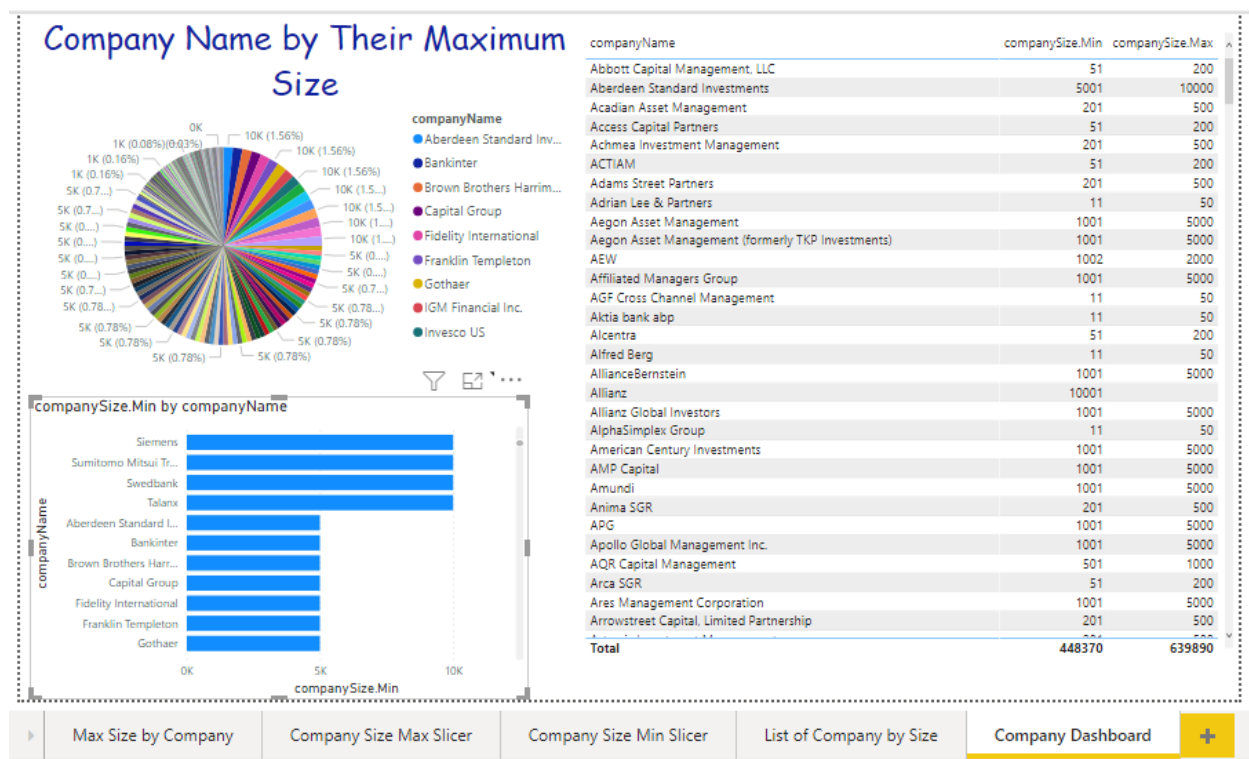

This Pie chart shows the Company by size like how many maximum employees work in specific company.

This chart set a slicer so you can set up the Minimum size and see the companies which falls on that size.

This chart set a slicer so you can set up the Maximum size and see the companies which falls on that size.

This is dashboard where all companies detail with chart. Once click on chart one company will shows detail specific that company on right side.
